KL2 Program Model

KL2 seeks to develop a diverse group of successful independent investigators in multi-disciplinary clinical and translational research.

1. Scholars build expertise to establish and advance careers in multi-disciplinary clinical and translational research.
   - Conduct high quality mentored research
   - Complete didactic research training including training in health disparities research
   - Establish focus and goals for career development
   - Develop skills in building multidisciplinary collaborations
   - Develop grantmanship

2. Scholars demonstrate research productivity.
   - Publications
   - Scientific presentations
   - Grant submission

3. Scholars build the navigation skills they need to excel in their field.
   - Negotiation skills
   - Leadership skills
   - Conflict resolutions skills
   - Communication skills
   - Professional networking

4. Scholars develop a set of professional values
   - Integrity, rigor and reproducibility in the conduct of research
   - Personal-professional balance
   - Appreciation of the value of diversity and inclusion

Diverse cohorts of scholars advance successful careers

Diverse cohorts of scholars advance clinical and translational science

Clinical and translational research reflects strong ethics, integrity and respect

Improved Health And Health Equity
